The requirements of modern industrial processes and the severe competition of commercial enterprises now require not only more precise knowledge of temperatures, but in many cases also require a continuous automatic record of the temperature state extending over an interval of time. Several years ago, anticipating the need by technical students of a Course in High Temperature Measurements, the work of testing the various methods and apparatus was begun. After three years devoted to this survey, a course was organized and offered. It was received with such favor that it was made a required subject in the plan of study for students of chemical engineering at Purdue University. Each year since then, a new edition of Notes, in mimeographed form, has been put into the hands of the students. It has now been thought proper to put into more readable and permanent form the results of this experience. In the present book, the needs of three distinct classes of readers have been kept in mind - college students, technically trained men who deal with processes requiring high temperature measurements, and less trained observers who may make the measurements. For the first two classes, who require much fuller theoretical discussions than the latter,...
