General Books LLC. Paperback. Book Condition: New. This item is printed on demand. Paperback. 60 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1894 Excerpt: . . . PARADOX VII. Concerning inertia considered as a tendency. The hypothesis that inertia has no direct character of its own, but is simply a tendency of the inert body to remain in the state, whether of rest or motion, in which it may happen to be. Motion is the result of an impulse imparted to its subject. There can be no motion where there is nothing to be moved. This impulse, from whatever source imparted, overcomes the inherent gravity of the mass it is setting in motion. In overcoming the inherent gravity it converts it temporarily into momentum. This momentum, inverting the previous relations of gravity, progressively increases the velocity of the imparted motion up to a certain point, when, if the original impulse be not sustained or renewed, the inherent gravity of the mass, reasserting itself as a tendency to rest, gradually brings the moving body back to its original inert state. The inherent gravity or weight of the mass is temporarily converted into momentum by the impulse which overcomes its original inert state. This momentum gradually increasing, or, in other words, the resistance weight offers to the imparted impulse as gradually decreasing under the influence of the consequent motion, the combined result, caused by the original impulse and the diminishing resistance or developing momentum, is a progressively increasing rate of motion to a culmination of velocity. At this point the inherent gravity or weight of the moving body commencing to reassert itself as...
