RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 92 pages. Original publisher: Adelphi, MD : Army Research Laboratory, 2009 OCLC Number: (OCoLC)527657784 Subject: Meteorological instruments. Excerpt: . . . 2. 1 3D Sonic Anemometers An array of multiple-level, micrometeorological (micro-met) masts towers were located in and about the OKC urban and suburban areas providing both horizontal and vertical spatial coverage spanning the 3DWF models computational area of simulation. Ten-meter masts with sonic anemometers (R. M. Young, Model 81000) at two or three levels were placed in three suburban area locations to document incoming and outgoing flows. Two other 10-m masts, also with two or three levels of sonic anemometers, were placed in industrial warehouse locations east and west of the CBD to document the interaction that low-level structures have upon the flow field. On all 5 towers, instruments were mounted at levels 10 and 5 m above the ground; on two of the towers, a third sonic anemometer was mounted at a height of 2. 5 m. Instruments mounted on the top of the five towers should not exhibit a tower shadow effect or any wind direction. Instruments below the 10-m level were mounted due south of the towers at the end of 2-m booms in anticipation of the prevailing southerly winds in Oklahoma during the summer. Anemometer elevations (heights above the ground) were accurate to about 0. 1 m for 10. 0-and 5. 0-m instruments and about 0. 05 m for the 2. 5-m instruments. All the meteorological instruments on the masts collected data 24 h per day throughout the entire JU2003 test period. All of the sonic anemometers measure or derive the three wind components (u, v, w), the speed of sound, and the ambient (...)
